WORKSHOP

The Intersection of Science and Security: a Case Study Approach

*Continuing the global dialogue with the scientific and science policy community:
focus on Asia and the Western Pacific*

Sponsored by United States Government and hosted by
the National Science Advisory Board for Biosecurity

National Institutes of Health
December 9, 2011, 1-4:30 pm
Masur Auditorium,
NIH Campus, Building 10
9000 Rockville Pike, Bethesda, Maryland

- **What is the purpose?** To give attendees a greater understanding of dual use research, including an awareness of strategies for managing dual use research of concern and an appreciation of how these issues are being addressed around the globe.
- **What is the scope?** The case studies, involving Mousepox and SARS-like virus, are examples of dual use research of concern that highlight issues needing to be considered by investigators, institutions, journal editors, governments, and the scientific and security policy communities.
- **What will be covered?** In addition to presentations of two case studies, there will be discussions among all panelists on global science and security issues as well as those of special interest within Asia and the Western Pacific. These discussions will include information on training and education resources currently available.
- **What is the format?** A workshop with brief presentations and guided discussions using case studies of published scientific research that raise security concerns relevant to Asia and the Western Pacific region and globally.
- **Who is speaking?** The presenters and panelists are from Asia, the Western Pacific, and the United States. They represent the perspectives of academia, government, non-governmental organizations, and the National Science Advisory Board for Biosecurity and have expertise in biosafety, biosecurity, bioethics, biodefense, the responsible conduct of research, and scientific publishing.
- **Who should attend?** Scientists and others with an interest in science policy, scientific publishing, dual use research, biosafety, biosecurity, bioethics, biodefense, and responsible conduct of research. Those with an interest in how these issues are viewed and affect Asia and the Western Pacific will find this event of particular value.
- **Will this be an interactive event?** Attendees will have the opportunity to ask questions of the presenters and panel members.
- **Where can more information about the workshop be found?**
